

V-ENABLE, Inc, is the global leader in developing innovative products and solutions, using our patent-pending speech search technology, to offer the fastest, easiest and most interactive user experience for accessing mobile content and applications. Client/Server speech applications, powered by V-ENABLE technology, are available for developers, content publishers, and carriers for integration into BREW, JAVA, or SYMBIAN applications. The company, founded in 2001, is headquartered in San Diego, CA.

Current Mobile User Issues:

- Finding and interacting with content is difficult and time consuming due to limited screen size and a tree-structured mobile content directory.
- Mobile users find data services difficult to use because of a constraining tap text entry process.
- Exploding levels of wireless data content and applications require longer times to locate and access content.

Our veANYWAY™ Solution:

- Enables users to easily find, access, and interact with mobile content using speech.
- Enables screen navigation and interaction with content (move camera phone to scroll and/or interact in game play).
- Available for **BREW, Java, and Symbian** applications.

Commercial Success:

V-ENABLE has launched the first set of commercial mobile applications across 6 carriers that combine the power of speech input with visual output. Multiple commercial applications utilize our patent-pending speech search technology to easily preview and download ringtones, access directory information and maps, and find entertainment content.

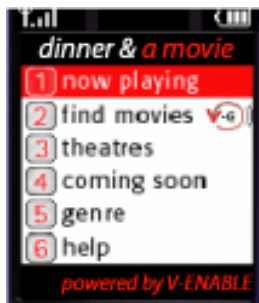

Commercial Results:

- Speech input is up to 5 times faster than traditional text tap input.
- Only 2-5 second response time with over 90% accuracy of speech input.
- Over 70% of users prefer to input via speech versus text in applications.

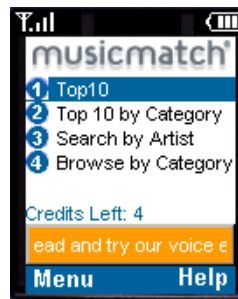

V-ENABLE Applications Using Speech

Say It, Moviefinder
V-ENABLE

Say a current movie and instantly get back showtimes, descriptions, and nearby restaurants!

musicmatch TONEBOX
musicmatch

Say your favorite artist and instantly start previewing and downloading tones!

Say It, Map It
V-ENABLE

Say your location and instantly get maps and driving directions!

Partners and Customers:

We work with the best-in-class partners to promote cooperation in the development, marketing and delivery of applications using speech technology. Current partners and customers include:

Investment Partners:

V-ENABLE is backed by Siemens Mobile Acceleration Corporation (SMAC) and Sorrento Ventures. Other investors include Tech Coast Ventures (TCA) and Acumen Venture Partners.
